

READ ME

Mysql installation 8.0

Python 3.9 or greater

For Windows OS use the Windows specific Gui_display_trips.py therwise use from master

For Mac OS

Csv

Json

deepcopy

os

tkinter

on MAC OS tkMacosx – not required on windows

yagmail

mysql.connector

matplotlib

TO RUN the process

Open MySql, run the Database script

Edit the config.py file to add your own password

To process your own data. Download your history from Google maps and rename

to:“Google_history_download_monthly.json”

to load the data from this file, run extract-history data

to load the data from this file, run extract-history data

run main for the first gui and process submit button to proceed

second process – run gui_Db_ubpdae

Run Statistics LAST – I have had trouble removing the window!
